### SUMMARY

Results-driven Web Developer specializing in building and deploying secure, scalable backend services with the MERN stack. Proven ability to deliver full-stack applications from concept to deployment, with expertise in RESTful API design, JWT authentication, and cloud deployment. A meticulous problem-solver passionate about writing clean, efficient code.

### PROFESSIONAL EXPERIENCE

**MEHKOHC PAM LLC**  
**Data Analyst**

Jun 2024- Jul 2024

Forecasted electricity imports, exports, production, and consumption for 15 West African countries from 2022- 2032, using historical data (2014-2021) and Excel's LINEST function for regression analysis. I cleaned and organized large datasets, generating insights that supported energy security, infrastructure planning, and policy formulation. My analysis highlighted key electricity exporters like Ghana and Ivory Coast, and import-dependent countries such as Niger and Burkina Faso, aiding strategic decisions in the energy sector

**KRAFO SYSTEMS (Internship)**  
**Backend Developer**

Aug 2025- Aug 2025

As a Backend Developer at Krafo Systems, I built and maintained secure, scalable RESTful APIs using Node.js, Express.js, and MongoDB. I designed data models with Mongoose, applied validation with Joi, and integrated Cloudinary for media management, enabling smooth handling of Blogs, Consultation, Events and Courses. I also implemented role-based authentication with JWT, tested endpoints in Postman, and optimized API responses for frontend integration with React and Axios. Collaborating with the UI/UX team, I ensured backend reliability translated into a seamless user experience, delivering features that combined security, scalability, and usability.

### PROJECTS

**[Lumea API](#) || [WEB APP](#)**

- Built and deployed a REST API backend supporting user authentication, skincare analysis, and appointment booking.
  - Integrated OpenAI's API for intelligent image analysis, delivering personalized skincare recommendations and creating a key selling point for the application.
  - Deployed the full-stack application to live production environments (Render), ensuring high availability

**[Retro-Arcade Theme Portfolio](#)**

- Built a themed portfolio with terminal UI, typewriter effects, and responsive layout.
  - Highlighted frontend skills using Tailwind CSS, animations, and clean design.
  - Demonstrates personal branding, frontend aesthetics, and web performance optimization.

**[Library Management API](#) || [WEB APP](#)**

- Designed a RESTful API to manage a complex book database with relational data models for authors and genres.
  - Implemented a secure admin panel protected by JWT authentication, enabling privileged operations (add, edit, delete) for authorized users only.
  - Designed with clean controller-based architecture for easy scalability and team collaboration.

**[Ads Management API](#) || [WEB APP](#)**

- Developed a dedicated API with CRUD endpoints for managing ad listings and admin moderation controls.
  - Established a CI/CD pipeline using GitHub and Render for automated deployments, demonstrating proficiency in modern DevOps practices.
  - Tailwind CSS used to create a basic admin front-end interface

### EDUCATION & CERTIFICATIONS

**Bachelor's of Business Administration Major: Accounting**  
Kwame Nkrumah University of Science and Technology (KNUST)  
**Google Data Analytics Certificate Coursera**  
**Web Development Fundamentals IBM SkillsBuild**

### RELEVANT SKILLS

**Languages:**JavaScript (ES6+), HTML5, CSS3  
**Frameworks & Libraries:** Node.js, Express.js, React, Mongoose, Tailwind CSS  
**Databases:** MongoDB  
**Auth & Security:** JWT (JSON Web Token) **Tools & Platforms & Tools:** Git, GitHub, Render, Postman, VS Code  
**Concepts:** RESTful API Design, JWT Authentication, CRUD Operations, CI/CD
